Syllabus for

## **Program:** Bachelor's Degree in Life Science

## **Program Code: RUSLSc**

**CBCS 2022-23** 

(Choice based Credit System for Academic year 2022–2023)

GA	GA Description
	A student completing Bachelor's Degree in Life Science
	program will be able to:
GA 1	Demonstrate an understanding of biological systems across
	microorganisms, plants and animals. To develop necessary
	laboratory skills and analytical methods.
GA 2	Employ critical thinking and scientific knowledge to design
	experiments, record observations, analyse data and interpret
	results. They can further build their career in research.
GA 3	Create an awareness of environmental issues, biological
	diversity, and how we can make a positive impact on it.
GA 4	Inculcate scientific temperament and generate problems
	solving approaches in students when they integrate
	themselves in the larger society.
GA 5	Develop necessary laboratory skills and analytical methods.
anna	

## **Graduate Attributes**

PO	Description			
	A student completing Bachelor's Degree in the subject of Life Science will be able to:			
PO1	To be able to describe the biomolecules and metabolic processes, compare developmental processes and physiological systems in plants and animals, neuroendocrine system, short term and long term memory, learning and behaviour, neurological disorders, biological evolution, human evolution of thought process, which allows for curiosity, and enhances learning process ahead.			
PO2	To be able to describe interspecific interactions in the ecosystem, Plant Tissue Culture techniques and its significance in agriculture, germplasm conservation and secondary metabolites, and Animal Tissue Culture techniques, Fermentation Technology and its role in industry and society			
PO3	To be able to explain DNA Cloning, use of cloning vectors like <i>E.coli</i> plasmids, cosmids, phagemids, viral vectors, significance of restriction enzymes, apply Mendel's laws, gene regulation in prokaryotes and eukaryotes, defense mechanisms in plants and			
	animals, innate and adaptive immune system, and its			

## **PROGRAM OUTCOMES**

	Fermentation Technology and its role in industry and society			
PO3	To be able to explain DNA Cloning, use of cloning vectors like			
	<i>E.coli</i> plasmids, cosmids, phagemids, viral vectors, significance			
	of restriction enzymes, apply Mendel's laws, gene regulation in			
	prokaryotes and eukaryotes, defense mechanisms in plants and			
	animals, innate and adaptive immune system, and its			
	disruptions in the form of allergies, autoimmune diseases			
	and immunodeficiency disorders. applications of			
	Monoclonal antibodies in cancer			

PO4	Apply Biostatistics to analyse, Probable Chance of
	Occurrence, Normal Population, Student's t-test, Correlation
	and Regression analysis, Chi-Square test, data analysis for
	project work
PO5	Skills-Perform assays to identify, purify, quantify,
	immobilize proteins/enzymes using techniques like
	Centrifugation, Electrophoresis and Chromatography,
	dissection of animals, protocols to handle preserved
	animals, working in aseptic conditions, use and maintaining
	of diagnostic kits, pedigree analysis in humans, karyotyping
	in plants
PO6	Skills- Apply Bioinformatics to understand the evolution of
	macromolecules, the genomic status of organisms, to
	compare the phylogenetic relationships, to analyse nucleotide
	and protein sequences, to annotate nucleotide sequences and
	derive structure function relationship.
PO7	Environment and Sustainability- to analyse the local
	biodiversity at residential sites of students and the changes
	occurring in the biodiversity and to conserve the same,
	awareness about implementation of Laws Regulations,
	citizens awareness to oppose under the aegis of NGO
PO8	Ethics- awareness of plagiarism in scientific work,
	acknowledging/ citing the work, lab ethics in handling
·O.	biological materials and chemicals, to be able to apply
	professional and ethical principles, minimize waste and
	ethical waste disposal
PO9	Individual and Team Work- to be able to work independently
	as well as lead a team and be a team player,

PO10	Communication skills- to be able to communicate
	clearly through presentations as well as document, write
	effective reports or communicate and work in a team
PO11	Project Management- to be able to write SOPs for
	instruments, design experiments, analyse data, work in a
	team, a scientific way of thinking, a diverse approach to
	scientific enquiry towards an idea .
PO12	Life Long Learning- to be able to learn independently and
	adapt to changing needs of the society

### DSC - Discipline Specific Course \*

#### SEC - Skill Enhancement Elective Courses \*

6

### Course Code: RUSLSc101

#### **Course Title:** Molecular and Cellular studies in Life Sciences I

## Academic year 2022-2023

#### **COURSE OUTCOMES:**

COURSE	DESCRIPTION				
OUTCOME	CO''				
	Students will gain insights about following;				
CO1	To explain structures and functions of amino acids, proteins, nucleic acids, nucleus and nuclear membrane, giant chromosomes, lampbrush chromosomes, functions of cytoskeletal elements.				
CO2	To describe plant cell wall, bacterial cell wall and fungal cell wall, eukaryotic and prokaryotic cells, different microbial media, microbial preservation techniques.				
CO3	To classify amino acids, proteins in different ways				
CO4	To differentiate between essential nonessential amino acids, complete, incomplete proteins, different forms of DNA, Distinguish between different phases in cell cycle and cell division.				
C05	To compare different cell wall types, compare different phases of microbial growth				

#### **Course Code: RUSLSc102**

#### Course Title: Physiological systems, Genetics and Ecology I

## Academic year 2022-23

#### **COURSE OUTCOMES:**

<b>COURSE OUT</b>	COMES:
COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;
CO 1	Students will learn comparative physiological systems from lower to higher phyla in animals and they will also study the parallel systems in plants eg. Respiration in animals and plants.

	П	its types, Henderson Hasselbalch equation, significance of water.Amino acids: Classification based on R groups, essential, semi essential and non essential amino acids.Proteins: Classification, Functions, Incomplete and complete proteins, Structural organization- Primary, Secondary, Tertiary,Quaternary levels. One example ofeach. Nucleic acids: Structure of nucleosides and nucleotides, structure of nucleic acids (A,B,Z forms); the structure of DNA lends itself to its function as hereditary molecule.IIFeatures of Eukaryotic and Prokaryotic

		<ul> <li>Virus structure, Life cycle of bacteriophage (Lytic and Lysogenic), Plant and Animal virus (One example: TMV and Adeno virus, Corona virus). Microbial growth:</li> <li>Influencing factors, culture media (enriched and minimal), isolation, preservation, life cycle and growth curve of <i>E.coli</i>.</li> <li>Cell division:</li> <li>Mitosis and Meiosis with phases in cell division with significance.</li> </ul>	
	II	Cytoskeletal elements and cell wall Nucleus: Structure and Chromosome packaging, lampbrush and polytene chromosome. Cytoskeletal elements: Microfilaments: Structure and function in striated muscle fibers. Role in cytoplasmic streaming in plants. Microtubules: Structure as in cilia or in flagella, mechanism in movement. Function in mitotic spindle. Intermediate filaments: Structure and function. Structure of cell wall: Bacterial cell wall: Gram positive and Gram negative. Fungal cell wall Plant cell wall: Primary and secondary	15 Lectures
RUSLSc102		Physiological systems, Genetics and Ecology I	2 Credits/4 5Lectures
	I	<b>Types of Nutrition and Nutritional</b> <b>adaptations for different habitats</b> <b>Autotrophic nutrition</b> – Importance of photosynthesis in plants and in autotrophic prokaryotes .	15 Lectures

		Macro and micro nutrients for plants. Insectivorous plants Heterotrophic nutrition – ex. holozoic, saprophytic (fungi) and parasitic (Cuscuta, Tapeworm) i) fluid feeders (ex. Mosquito or Housefly) ii) microphagous (ex. Amoeba or Paramecium) iii) macrophagous (mammals)	.0
		<b>Digestive systems of mammals</b> Human and Ruminant Digestion Evolutionary adaptation associated with diet eg. dental, stomach and intestine.	011605
	II	Mendelian Inheritance: Concept of homozygous, heterozygous, phenotype, genotype, alleles; Mendel's Laws and Mono & Dihybrid ratios with problems, chi square–for 3:1 and 1:1 ratios. Use sickle cell anemia as an example to explain the concept of genes. Chromosomal inheritance: Sutton's hypothesis, sex-linked inheritance, study of human pedigrees (e.g. Sex linked dominant and recessive; autosomal dominant & recessive)	15 Lectures
Rauns	II	<ul> <li>Transport, Translocation in plants and Circulation in animals</li> <li>Translocation in plants: Transport of water and inorganic solutes – transpiration, stomatal functionand regulation, role of proton pumps and factors affecting ascent of xylem sap.</li> <li>Transport of organic solutes – mechanism and its regulation.</li> <li>Circulation in animals:</li> <li>Animals without a circulatory system eg.</li> <li>Hydra and jellyfish</li> <li>Open and closed circulatory system eg. insects vs worms.</li> <li>Vertebrate circulatory system:</li> </ul>	15 Lectures

	Tiglion # Typeli	no a bad
	<ul> <li>Heart; single and double circulation.</li> <li>Specific adaptations – mammals at high altitudes and diving mammals.</li> <li>Cardiovascular system in health and disease – hypertension and atherosclerosis and the role of exercise.</li> <li><b>Respiration and Gaseous Exchange:</b> Gaseous exchange in small animals (across surface) and cutaneous respiration in frogs. Gaseous exchange in plants – Stomata and Pneumatophores.</li> <li>Gaseous exchange in invertebrates – trachea in insects, book lungs in scorpion</li> <li>Gaseous exchange in vertebrates – gills and lungs</li> </ul>	SHEOS
	PRACTICALS	2 Credits Total 45 lectures
RUSLScP 101	Practicals in Molecular and Cellular studies in Life Sciences - I (PRACTICAL – I)	
23/11/2	<ul> <li>I.Good Laboratory practices:</li> <li>An introduction to Laboratory discipline and GLP, SOP (in detail) and Instrument safety GLP Handling Biological/ Blood and hazardous chemicals.</li> <li>Documentation and validation, Industry purpose. Survey of the organization of laboratory instruments, chemicals and glassware.</li> <li>Lab safety (instruments and chemicals) [incorporated into every practical].</li> </ul>	
	2.Introduction to Elementary	
	16	

	1
	<b>microbial techniques :</b> Sterilization & Disinfection Air microflora Microbial Staining technique and Microscopy
	Comparative study of samples from 5 different sources to check gram positive and gram negative bacteria - Buttermilk, tap water, sewage water, food Item, soil, rotten – effect of heat using Monochrome Staining Gram Staining. Cell wall staining <b>3.Micrometry Eukaryotic cells and</b> <b>Microscopicmeasurements:</b> Staining of onion peel / plant cells to reveal structure and organization of cells Micrometry - Using the microscope to measure size of cells / nucleus/ different pollen grains . <b>4.Effect of temp on</b> <b>movements in plants and animals using</b> <b>any system:</b> Cytoplasmic streaming in Vallisneria and Hydrilla Culturing and observation of feeding in Paramoecium from Hay infusion <b>5.Preparation of solutions</b> of a given chemical compound Molar and percentage solutions – Concept and calculations only. <b>6.Molecular biology</b> <b>and Biochemistry:</b>
2 stuller.	Isolation and Detection of DNA (by observing spools) from Onion or any other DPA detection optional / demonstration. <b>7.Histochemistry:</b>
	Localization of Proteins and Nucleic acids from the suitable system Proteins of peas / cockroach muscles DNA and RNA from onion peel using methyl green pyronin staining. <b>8.Instrumentation and techniques:</b>
	Calibration of the pH Meter with standard
	· · · · · · · · · · · · · · · · · · ·

	buffer pH4 and pH9.2 as per GLP	
	Checking of pH for common foodstuff e.g.	
	Milk/cola drink/Lime juice or any other	
	relevant sample.	
RUSLScP	9.Microscopy:	2
102	Principles of light and Fluorescent	Credits
	Microscopy, Electron Microscopy-Scanning	Total 45
	Electron Microscopy (SEM) and	lectures
	Transmission Electron Microscopy (TEM).	
	Study of Electron Micrographs as listed	
	below: Mitochondria	
	Lysosomes:Basement membrane/	
	junctions Cilia: Both normal and	
	pathological	
	10.Cell division:	
	Determining effect of colchicine / mitotic	
	inhibitor/environmental pollutant / mitotic	
	activator on mitosis in onion root tip by	
	calculating mitotic index	
	11.Meiosis from <i>Tradescantia</i>	
	(demonstration/ Photograph)	
	Practicals in Physiological systems, Genetics andEcology - I ((Practical -II)	
	1.Study of Plant Tissues :	
	Temporary mounting/ observation of permanent	
	slides of Mounting of Dicot /Monocot	
	Stem,Root. 2.Hematology:	
	Differential count of WBCs using	
2.0.	Giemsa/ Lieishman stain.	
	3. Study of Mouth parts in insect and	
	<b>Comparative assessment of mouth</b>	
	parts: Preparation of fresh mount of;	
	Piercing and sucking type- eg	
	Mosquito Sponging type- eg	
	Housefly	
	Biting and Chewing type- eg Cockroach	

	(if available 4. Collection of blood group information from family and construction of pedigree charts. 5. Diversity of Life: Five Kingdom Classification (Outline)		
--	---	--	--

6. Soil analysis: Edaphic factors
Texture, water content, soil organisms
7. Water Quality - Effect of temperature,
light, pH
8. Field study to at least one site: To
understand flora and fauna, visit a national park
a century or pond or lake or marine ecosystem.
To prepare a field report to be duly certified
Any Industrial Visit or Invited Guest lecture
with reference to FYBSc Life-Science Syllabus

## Course Code: RUSLSc201

## **Course Title:** Molecular and Cellular studies in Life Sciences II

## Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE	DESCRIPTION
OUTCOME	
	Students will gain insights about following;
CO 1	To explain structure and functions of carbohydrates and lipids, classify lipids and carbohydrates, to illustrate stereochemistry and chemical reactions of monosaccharides.
CO 2	To classify and differentiate between different types of transport systems across cell membranes, plant and animal cell junctions.
CO 3	To explain structure and functions of cell organelles like ER, Golgi apparatus, Lysosomes, Peroxisomes, Glyoxysomes, Chloroplasts and Mitochondria.
CO 4	To differentiate between different separation techniques,like chromatography- paper and thin layer, to explain electrophoresis, differential centrifugation, salting in and out, their advantages, disadvantages and applications of all these techniques.

### **Course Code: RUSLSc202**

### Course Title: Physiological systems, Genetics and Ecology II

### Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;
CO 1	Explain the concept of homozygous, heterozygous, phenotype, genotype and alleles.
CO 2	Explain the Mendelian laws, monohybrid and dihybrid ratios with problems and chromosomal inheritance.
CO 3	Interspecific interactions at ecological level and distribution of the population can be related to biodiversity visits.

33 RAMNARAIN RUIA AUTONOMOUS COLLEGE, SYLLABUS for Bachelor's Degree in Life Science 2022-23

## **Course Code: RUSLSc301**

Course Title: Physiological Systems in Plants and Animals-I

Academic year 2022-23

## **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;

CO 1	Students will understand as to how the physiological systems in the human body attain homeostasis.
CO 2	Explain the Central nervous system(CNS) and peripheral nervous system (PNS). Understand concept of action potential and resting membrane potential in Nerve Impulse. Explain the role of synapse in nerve impulse.
CO 3	Understand and compare different plant movements. To find its role in plant growth by designing an experiment to observe different plant movements
CO 4	Explain the Behaviour studies in animals with suitable examples. Compare between innate and learned behaviour. Elaborate on physiological aspects such as fat accumulation and thermoregulation during migration in animals
CO 5	Explain alternation of generation in plants. Elaborate on the role of environmental factor in sex determination in animals. Discuss the importance of plant and animal interaction sex determination. Basis of sex determination in plants and animals.

RAMNARAIN RUIA AUTONOMOUS COLLEGE, SYLLABUS for Bachelor's Degree in Life Science 2022-23

CO 6	Discuss physiology and explain the importance of hormones in menstrual cycle, pregnancy, parturition and menopause.
<b>CO</b> 7	Explain the importance of different types of ovules in plants. Compare microsporogenesis and megasporogenesis.

## Course Code: RUSLSc302

## Course Title: Biochemical Approach to Life Processes in Plants and Animals-

## I Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION			
	Students will gain insights about following;			
C01	To classify enzymes, specificity reactions of enzymes,			
CO2	To explain models of enzyme action, enzyme kinetics and inhibition reactions, allostery, isoenzymes.			
CO3	To propose a strategy to isolate and purify enzymes, compare different techniques of purification.			
CO4	To explain the applications of enzymes in industry and medicine.			
CO5	To describe the pathways of catabolism of carbohydrates, proteins and lipids and to evaluate bioenergetics in catabolism of carbohydrates and lipids.			
CO6	To correlate and integrate metabolism of all biomolecules into the TCA cycle, and then the electron transport chain and thus			

35

RAMNARAIN RUIA AUTONOMOUS COLLEGE, SYLLABUS for Bachelor's Degree in Life Science 2022-23

summarize the and energy gen	sequences involved in cellular respiration eration.

## **Course Code: RUSLSc303**

## Course Title: Evolutionary Biology, Biostatistics and Bioinformatics in Population

#### Studies-I

## Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;
CO 1	Evolutionary biology and genetics reveal the diversity of phyla in different geographic locations; the allelic frequencies that probably operate , correlations and other statistical applications will reveal the changes in population studies.
CO 2	To know about virtual libraries and databases
DETAILED S	YLLABUS

36

r	1		
	Ι	Role of Hormone and Homeostatic	15 Lectures
		Mechanisms in Animals and Plants	Lectures
		Control systems in homeostasis and components	
		of homeostatic control.	
		Cell signalling in the nervous system and	
		endocrine system [eg. Amines (catecholamine or	
		thyroid hormones)] –	
		a) Regulation of receptors (up and down regulation).	
		b) Regulation of cell signalling: 1 <sup>st</sup> , 2 <sup>nd</sup> and 3 <sup>rd</sup>	
		orderfeedback mechanisms.	
		Hormones of Pineal, Hypothalamus,	
		Pituitary, Thyroid, Parathyroid, Pancreas,	
		Adrenal gland, Testis and Ovary.	
		Plant Hormone- Auxins, Gibberellic	
		acid, Cytokinin, Abscisic acid,	
		Ethylene.	
	II		
		Introduction to Nervous System, Animal	15
		And Plant Movements and Behaviour	
		Human Nervous System – CNS and PNS	
		overview. Types of cells: Neuronal, Glial cells	
		Role of meninges and CSF	
		Nature of the Nerve Impulse – Resting potential	
		andAction Potential.	Lectures
		Introduction to types of Synapses and	
	• •	Nerve impulses. a) Behaviour in animal- Innate and learned with suitable examples.	
		b) Migration in animals.: Physiological aspect	
	<i><b>KO</b></i>	(Fat accumulation and thermoregulation).	
		Plant movements – Tropisms, Nasties –	
		overview and its molecular aspects with suitable	
<u> </u>		examples	
50	III	<b>Developmental Biology in Plants and</b>	15 Lectures
C		Animals 1. Basis of Sex Determination.	
		(a) Plants: Maize	
		(b) Animals: Role of SRY gene and	
		Aromatase (c) Role of environmental factors	
		– Temperature and Parthenogenesis in	
		insects Eg. Wasp/Honey bee/Ants	

	1		
		<ul> <li>(d) Plant-animal interaction for reproduction Figwasp / Gall wasp</li> <li>(e) Sex reversal</li> <li>Alternation of generations in plants Eg. <i>Adiantum</i>.</li> <li>Ovarian and testicular functions, puberty and regulation of uterine changes in menstrual cycle, menopause, pregnancy, parturition, lactation. Artificial regulation of reproduction: Use of contraceptive methods.</li> <li>1. Development of embryos in monocot and dicot plants.</li> </ul>	lleog

#### Course Title: Physiological Systems in Plants and Animals-II

## Academic year 2022-23

**COURSE OUTCOMES:** 

COURSE OUTCOME	DESCRIPTION	
	Students will gain insights about following;	
CO 1	Adaptive mechanism in plant and animal to extreme environmental condition	
CO 2	Regulation of energy stores and various eating disorders.	2
CO 3	To describe defense mechanisms in plants and animals.	
CO4	To differentiate between innate and adaptive immunity and describe them.	
CO 4	Explain epidemiology, aetiology, pathology, diagnosis, therapy and preventive measures and vaccines for different diseases	

## **Course Code: RUSLSc 402**

## Course Title: Biochemical Approach to Life Processes in Plants and Animals-

## II Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME

DESCRIPTION

## Students will gain insights about following;

48

CO 1	To explain the anabolic pathways in carbohydrate, lipids and proteins
CO 2	To compare non- cylcic and cyclic photosynthetic pathways. To justify how photorespiration is a wasteful process and to review how C4 plants circumvent it.
CO 3	Understand the role of different enzymes in replication of DNA. Compare between the prokaryotic and eukaryotic replication process.
<b>CO 4</b>	Explain the transcription and translation process in prokaryotes and regulation of gene expression in prokaryotes.
CO 5	Compare transcription and translation process in eukaryotes. Understand the concept of post translational modifications in eukaryotes

## Course Code: RUSLSc 403

## Course Title: Evolutionary Biology, Biostatistics and Bioinformatics in Population

## Studies-II

# Academic year 2022-23

## **COURSE OUTCOMES:**

COURSE	DESCRIPTION
OUTCOME	
6-9).	Students will gain insights about following;
CO 1	Students should know;human evolution from social to cultural changes , from the Hunter gatherer type to the most sophisticated type of today.

CO 2	Concept of Species and Speciation, Mitochondrial DNA, Evolution of Humans, Concepts like altruism and selection, Society Evolution and Genetic Engineering.
CO 3	Study bio statistical concepts like student's t test F- Test, Chi-Square test.
CO 4	To explain the features of the genetic code and to apply it in translating nucleic acid sequence.
CO5	To annotate and to translate nucleic acid sequences into protein sequences, to evaluate protein sequence with location and function,
CO6	To compare and contrast molecular and morphological phylogenetic trees, to explain the parsimony principle and to construct phylogenetic trees.

#### I Adaptive Mechanisms to Environmental

**15 Lectures** 

#### Changes

Adaptations in plants to extreme thermal conditions. Adaptations in animals to extreme thermal conditions.

Fever, Hyperthermia, heat exhaustion and heat stroke. Thermogenesis: shivering and nonshivering	
Thermogenesis: shivering and nonshivering	
thermogenesis, Hyperthermia induced by	0
pyrogens. Regulation of energy stores: control of	X
food intake, Role of Leptin, Ghrelin and	5
Kisspeptin.	
Eating disorders: Anorexia and Bulimia	
Nervosa, Obesity, Diabetes.	
II Homeostasis during infections 15 Lect	ures
Innate Immunity and Adaptive Immunity.	
Mechanisms of Innate Immunity – In	
invertebrates (hemocytes) and in Vertebrates.	
(Physical and Physiological barriers,	
Phagocytosis and inflammation). Mechanisms of	
adaptive	
immunity-T and B cells. (Mode of Recognition	
of Antigens).	
Virulence factors and toxins: virulence	
factors, exotoxins, enterotoxins, endotoxins.	
Host factors in infection: host risk factors,	
innate resistance.	
Biomolecules such as secondary	
metabolites, surface protectants and	
enzymes in plants. Parasite escape	
mechanisms in infection.	

Diseases in plants and animals (with respect to epidemiology, aetiology, pathology, diagnosis, therapy, preventive measures and vaccines giving the current status)	15 Lectures
Vector borne Diseases– Malaria, Dengue or Chikungunya.	
Viral Disease-AIDS, Herpes, Swine	0
flu, Corona Virus. Bacterial Diseases- Tuberculosis or	
Typhoid, Leprosy	
Fungal DiseasesRingworm orCandidiasis, Psoriasis.	2/,
	<ul> <li>to epidemiology, aetiology, pathology, diagnosis, therapy, preventive measures and vaccines giving the current status)</li> <li>Vector borne Diseases– Malaria, Dengue or Chikungunya.</li> <li>Viral Disease-AIDS, Herpes, Swine flu, CoronaVirus.</li> <li>Bacterial Diseases- Tuberculosis or Typhoid , Leprosy</li> <li>Fungal Diseases– Ringworm or</li> </ul>

	<ul> <li>Helminthic Diseases – Filariasis.</li> <li>Diseases in Plants: Tobacco Mosaic Virus, Crown gall bacterial infection, Puccinia fungal infection with crops.</li> </ul>

# **Modality of Assessment**

#### **Theory Examination Pattern:**

#### G) Internal Assessment- 40%- 40 Marks

Sr No	<b>Evaluation Type</b>	Mark s
1.	Written Test	20
2.	Presentation on topic from syllabus / Quiz / Open book test	10
3.	Presentation on any journal article/ newsletter/ book review/ conference/ guest lecture	10
	TOTAL	40

#### H) External Examination- 60%- 60 Marks

58 RAMNARAIN RUIA AUTONOMOUS COLLEGE, SYLLABUS for Bachelor's Degree in Life Science 2022-23

Semester End Theory Examination: (Deviation from the usual modality)

Owing to the pandemic situation prevailing in 2020 and continuing in 2021, the external examinations (Semester End) may be conducted online as per the instructions/circulars received from the University of Mumbai and Maharashtra State notifications from time to time. The conventional mode of external examination will commence again only after the declaration of normalcy by the Government authorities.

**Semester End Theory Examination:** Duration - These examinations shall be of **2 HRS** duration.

Theory question paper pattern:

Paper Pattern:			
Que sti on	Options	Marks Based on	
Q1	Answer any 2 questions out of 3	16 Unit I	
Q2	Answer any 2 questions out of 3	16 Unit II	

Und

Q3	Answer any 2 questions out of 3	16 Unit III
Q4	Short notes on topics of all 3 units; Answer any 3 out of 5;	12 Unit I, II, III

Total 60

#### **Practical Examination Pattern:**

#### G) Internal Examination:20 Marks

Particulars

#### Journal 05

#### **Experimental tasks** 15

Total 20

60 RAMNARAIN RUIA AUTONOMOUS COLLEGE, SYLLABUS for Bachelor's Degree in Life Science 2022-23

## **Course Code: RUSLSc 501**

## Course Title: Genetics and Immunology -I

## Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;
CO 1	Explain the discoveries of genetics. Understand the Structural organization of a prokaryotic genome. Explain structural organization of a eukaryotic genome. Compare unique and repetitive sequences of DNA. Explain chromosomal condensation. Justify the role of acetylation and methylation in methylation and remodelling.
CO 2	Compare the Life Cycle of lytic and lysogenic phages. Explain the processes of Conjugation, Transformation. Distinguish between generalized and specialized Transduction.
CO 3	To explain the role of different immune cells and organs, to distinguish between innate and adaptive immunity.
CO4	To explain the experimental design to obtain monoclonal antibodies and their applications
C05	To explain the techniques to estimate Antibody or Antigen concentrations, to describe the genetic recombination theory for generating a vast array of antibodies.
CO6	To construct the ontogeny flow chart of B cells and T cells, to connect innate and adaptive pathways of complement system activation, explain how structure of MHC molecules and

function are related, describe the activity of cytokines and immune responses.	
--	--

## Course Code: RUSLSc 502

### Course Title: Developmental Biology and Neurosciences- I

## Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION	
		3
	Students will gain insights about following;	
CO 1	Role of the germinal layers of the developing embryo and the expression of specific genes, life cycle of model organisms like amphibians & Arabidopsis	

**CO 2** Communications between the CNS and the PNS with the help of Neurotransmitters for memory and learning

## Course Code: RUSLSc 503

#### **Course Title:**Biotechnology and Genetic Engineering- I

## Academic year 2022-23

#### **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;
0'0	

CO 1	To explain and summarize the history of fermentation technology, to demonstrate ways of strain improvement, to design and compare media for various purposes, to formulate methods for downstream processing of different industrially important end products.
CO 2	To explain specifications for production of food and beverages, to justify the importance of different procedures of Quality Assurance in each of the production techniques.
CO 3	Understand the history of Gene cloning. Explain the role of different restriction enzymes in molecular cloning. Understand the concept of recombination mapping.
CO 4	Understand how Isolation of cloning vectors, selection of gene cloning organisms, isolation of desired DNA to be cloned is important.
CO 5	Explain the techniques like Immunological method, Nucleic acid hybridization method, Hybrid arrest and Hybrid release method(HART and HRT) for screening and selection of the desired clones.

## Course Code: RUSLSc 504

# Course Title: Ecology, Conservation Biology, Assessment and Management-

## I Academic year 2024-25

## **COURSE OUTCOMES:**

COURSE OUTCOME	DESCRIPTION
	Students will gain insights about following;

CO 1	Study of the biogeochemical cycles of nature, interaction of the biotic community and the abiotic resources, loss of biodiversity, disturbed ecological web of life.
CO 2	Citizens action for conservation, restoration significance in protection GMO,IPR for sustainable living, reducing demands and reducing conflicts towards sustainable development
