**Ramnarain Ruia Autonomous College**  
*Affiliated to Mumbai University*

**Program: TYBSc**

**Program Code: (Mathematics) RUAMAT**  
(Choice Based Credit System for the academic year 2022-23)

Ramnarain Ruia Autonomous College

## Program Outcomes

PO	PO Description-A student completing Bachelor's/Master's Degree in Mathematics program will be able to:
PO1	Recall and explain acquired scientific knowledge in a comprehensive manner and apply the skills acquired in their chosen discipline. Interpret scientific ideas and relate its interconnectedness to various fields in science.
PO2	Evaluate scientific ideas critically, analyze problems, explore options for practical demonstrations, illustrate work plans and execute them, organize data and draw inferences.
PO3	Explore and evaluate digital information and use it for knowledge upgradation. Apply relevant information so gathered for analysis and communication using appropriate digital tools.
PO4	Ask relevant questions, understand scientific relevance, hypothesize a scientific problem, construct and execute a project plan and analyse results.
PO5	Take complex challenges, work responsibly and independently, as well as in cohesion with a team for completion of a task. Communicate effectively, convincingly and in an articulate manner.
PO6	Apply scientific information with sensitivity to values of different cultural groups. Disseminate scientific knowledge effectively for upliftment of the society.
PO7	Follow ethical practices at work place and be unbiased and critical in interpretation of scientific data. Understand the environmental issues and explore sustainable solutions for it.
PO8	Keep abreast with current scientific developments in the specific discipline and adapt to technological advancements for better application of scientific knowledge as a lifelong learner.

## Program Specific Outcomes

PSO	Description-A student completing Bachelor's Degree in Science/Arts program in the subject of Mathematics will be able to:
PSO1	Demonstrate fundamental systematic knowledge of mathematics and its applications in engineering, science technology and mathematical sciences. It should also enhance the subject specific knowledge and help in creating jobs in various sectors.
PSO2	Demonstrate educational skills in areas of analysis, algebra, differential equations, Graph Theory and combinatorics etc.
PSO3	Apply knowledge, understanding and skills to identify the difficult / unsolved problems in mathematics and to collect the required information in possible range of sources and try to analyse and evaluate these problems using appropriate methodologies.
PSO4	Fulfil one's learning requirements in mathematics, drawing from a range of contemporary research works and their applications in diverse areas of mathematical sciences.
PSO5	Apply one's disciplinary knowledge and skills in mathematics in newer domains and uncharted areas.
PSO6	Identify challenging problems in mathematics and obtain well-defined solutions.
PSO7	Exhibit subject-specific transferable knowledge in mathematics relevant to job trends and employment opportunities.

## Program Outline

### FYBA

Course Code	Unit	Topics	Credits	L/Week
<b>Calculus I</b>				
RUAMAT101 Core Course	Unit I	Real Number System	3	3
	Unit II	Sequences		
	Unit III	Limits & Continuity		
<b>Linear Algebra I</b>				
RUAMAT202 Core Course	Unit I	System of Linear Equations & Matrices	3	3
	Unit II	Vector Spaces		
	Unit III	Basis & Linear transformation		

## Program Outline

### SYBA Semester III

Course Code	Unit	Topics	Credits	L/Week
<b>Linear Algebra II</b>				
RUAMAT 301	Unit I	Linear Transformations and Matrices	3	3
	Unit II	Determinants		
	Unit III	Inner Product Spaces		
<b>Discrete Mathematics</b>				
RUAMAT 302	Unit I	Preliminary Counting	3	3
	Unit II	Advanced Counting		
	Unit III	Permutations and Recurrence Relations.		

## Program Outline

### SYBA Semester IV

Course Code	Unit	Topics	Credits	L/Week
<b>Algebra II</b>				
RUAMAT401	Unit I	Groups	3	3
	Unit II	Subgroups and Cyclic Subgroups		
	Unit III	Normal Subgroups and Group Homomorphisms		
<b>Ordinary Differential Equations</b>				
RUAMAT402	Unit I	First order ordinary differential equations	3	3
	Unit II	Second order ordinary differential equations		
	Unit III	Numerical Methods for Ordinary differential Equations		

# Program Outline

## TYBA Semester V

Integral Calculus				
Course Code	Unit	Topics	Credits	L/Week
RUAMAT501	I	Multiple Integrals	2.5	3
	II	Line Integrals		
	III	Surface Integrals		
Algebra II				
RUAMAT502	I	Group Theory	2.5	3
	II	Normal Subgroups		
	III	Direct Products of Groups		
Topology of Metric Spaces				
RUAMAT503	I	Metric Spaces	2.5	3
	II	Closed Sets, Sequences and Completeness		
	III	Continuity		
Graph Theory (Elective I)				
RUAMATE504I	I	Basics of Graphs	2.5	3
	II	Trees		
	III	Eulerian and Hamiltonian graphs		
Number Theory and its Applications (Elective II)				
RUAMATE504II	I	Congruences and Factorization	2.5	3
	II	Diophantine Equations and their Solutions		
	III	Primitive Roots and Cryptography		

**Program Outline**  
**TYBA**  
**Practicals Course**  
**Semester V**

<b>Course</b>	<b>Practicals</b>	<b>Credits</b>	<b>L/Week</b>
RUAMAT501	Practicals based on RUAMAT501 and RUAMAT502	3	6
RUAMATP502	Practicals based on RUAMAT503, RUAMATE504I or RUAMATE504II	3	6

# Program Outline

## TYBA

### Semester VI

Course Code	Unit	Topics	Credits	L/Week
<b>Basic Complex Analysis</b>				
RUAMAT601	I	Complex Numbers and Functions of Complex Variables	2.5	3
	II	Holomorphic Functions		
	III	Complex power series		
<b>Algebra III</b>				
RUAMAT602	I	Ring Theory	2.5	3
	II	Factorization		
	III	Field Theory		
<b>Metric Topology</b>				
RUAMAT603	I	Compact sets	2.5	3
	II	Connected sets		
	III	Function spaces and Fourier Series		
<b>Graph Theory and Combinatorics (Elective I)</b>				
RUAMATE604I	I	Colorings of graph	2.5	3
	II	Planar graph		
	III	Combinatorics		
<b>Number Theory and its Applications II (Elective II)</b>				
RUAMATE604II	I	Quadratic Reciprocity	2.5	3
	II	Continued Fractions		
	III	Pells Equation, Arithmetic Functions, Special Numbers		

**Program Outline**  
**TYBA**  
**Practicals Course**  
**Semester VI**

<b>Course</b>	<b>Practicals</b>	<b>Credits</b>	<b>L/Week</b>
RUAMATP601	Practicals based on /RUAMAT601 and RUAMAT602	3	6
RUAMATP602	Practicals based on RUAMAT603, RUAMATE604I or RUAMATE604II	3	6

Ramnarain Ruia Autonomous College

# Detailed Syllabus

## FYBA Semester I

Course Code: CORE COURSE RUAMAT101

Course Title: Calculus I

Academic Year: 2022-23

CO	CO Description
CO1	to explain the properties of real numbers.
CO2	to explain the notions of convergent sequences.
CO3	to outline the concepts of limits and continuity.
CO4	to apply the concepts of limits and continuity in the fields of economics, physics and biological sciences.

### Unit I: Real Number System (15 Lectures)

Real number system  $\mathbb{R}$  and order properties of  $\mathbb{R}$ , Absolute value  $|\cdot|$  and its properties.

Bounded sets, statement of l.u.b. axiom, g.l.b. axiom and its consequences, Supremum and infimum, Maximum and minimum, Archimedean property and its applications, density of rationals, Cantors nested interval theorem.

AM-GM inequality, Cauchy-Schwarz inequality, intervals and neighbourhoods, Hausdorff property.

### Unit II: Sequences (15 Lectures)

Definition of a sequence and examples, Convergence of sequence, every convergent sequence is bounded, Limit of a convergent sequence and uniqueness of limit, Divergent sequences. Algebra of convergent sequences, sandwich theorem.

Convergence of standard sequences like

$$\left(\frac{1}{1+na}\right) \forall a > 0, (b^n), |b| < 1, (c^{1/n}) \forall c > 0 \text{ and } (n^{1/n}),$$

monotone sequences, convergence of monotone bounded sequence theorem and consequences such as convergence of  $\left(1 + \frac{1}{n}\right)^n$ .

Definition of subsequence, subsequence of a convergent sequence is convergent and converges to the same limit. Every sequence in  $\mathbb{R}$  has a monotonic subsequence. Bolzano-Weierstrass Theorem. Definition of a Cauchy sequence, every convergent sequence is a Cauchy sequence.

### Unit III: : Limits and Continuity (15 Lectures)

Brief review: Domain and range of a function, injective function, surjective function, bijective function, composite of two functions (when defined), Inverse of a bijective function.

Graphs of some standard functions such as  $|x|$ ,  $e^x$ ,  $\log x$ ,  $ax^2 + bx + c$ ,  $\frac{1}{x}$ ,  $x^n$  ( $n \geq 3$ ),  $\sin x$ ,  $\cos x$ ,  $\tan x$ ,  $x \sin\left(\frac{1}{x}\right)$ ,  $x^2 \sin\left(\frac{1}{x}\right)$  over suitable intervals of  $\mathbb{R}$ .

$\varepsilon - \delta$  definition of limit of a real valued function of real variable. Evaluation of limit of simple functions using the definition, uniqueness limit if it exists, algebra of limits, limit of composite function, sandwich theorem, left-hand limit  $\lim_{x \rightarrow a^-} f(x)$ , right-hand limit  $\lim_{x \rightarrow a^+} f(x)$ , non existence of limits,  $\lim_{x \rightarrow -\infty} f(x)$ ,  $\lim_{x \rightarrow \infty} f(x)$  and  $\lim_{x \rightarrow a} f(x) = \pm\infty$ .

Continuous functions: Continuity of a real valued function on a set in terms of limits, examples, Continuity of a real valued function at end points of domain, Sequential continuity, Algebra of continuous functions, Discontinuous functions, examples of removable and essential discontinuity.

#### Tutorials Based on Course : RUAMAT101

Sr. No.	Tutorials
1	Application based examples of Archimedean property, intervals, neighbourhood.
2	Consequences of l.u.b. axiom, infimum and supremum of sets.
3	Calculating limits of sequences.
4	Cauchy sequences, monotone sequences.
5	Limit of a function and Sandwich theorem.
6	Continuous and discontinuous functions.

## Modalities of Assessment

### Theory Examination Pattern

#### (A) Internal Assessment - 40% 40 Marks

Sr. No.	Evaluation Type	Marks
1	Test	20
2	Assignment/Viva/Test/Presentation	20
<b>Total: 40 Marks</b>		

#### (B) External Examination- 60% 60 Marks

1. Duration: These examinations shall be of **two hours duration**.
2. Theory Question Pattern

Paper Pattern				
Question	Sub-question	Option	Marks	Questions Based on
Question 1	a	Attempt any one of the given two questions.	20	Unit-I
	b	Attempt any two of the given four questions.		
Question 2	a	Attempt any one of the given two questions.	20	Unit-II
	b	Attempt any two of the given four questions.		
Question 3	a	Attempt any one of the given two questions.	20	Unit-III
	b	Attempt any two of the given four questions.		
<b>Total Marks: 60</b>				

### Overall Examination and Marks Distribution Pattern Semester-I

Course	RUAMAT101			Grand Total
	Internal	External	Total	
Theory	40	60	100	100

**Course Code: CORE COURSE RUAMAT201**

**Course Title: Linear Algebra**

**Academic Year: 2022-23**

CO	CO Description
CO1	Learner will be able to experiment with the system of linear equations and matrices.
CO2	to identify vector spaces.
CO3	to explain properties of vector spaces and subspaces.

## Unit I: System of Linear equations and Matrices (15 Lectures)

Parametric equation of lines and planes, system of homogeneous and non-homogeneous linear equations, solution of a system of  $m$  homogeneous linear equations in  $n$  unknowns by elimination and their geometrical interpretation for  $(m, n) = (1, 2), (1, 3), (2, 2), (2, 3), (3, 3)$ ;

Matrices with real entries; addition, scalar multiplication and multiplication of matrices; transpose of a matrix, types of matrices: zero matrix, identity matrix, scalar matrices, diagonal matrices, upper triangular matrices, lower triangular matrices, symmetric matrices, skew-symmetric matrices, Invertible matrices; identities such as  $(AB)^t = B^t A^t$ ;  $(AB)^{-1} = B^{-1} A^{-1}$ .

System of linear equations in matrix form, elementary row operations, row echelon matrix, Gaussian elimination method, to deduce that the system of  $m$  homogeneous linear equations in  $n$  unknowns has a non-trivial solution if  $m < n$ .

## Unit II: Vector Spaces (15 Lectures)

Definition of a real vector space, examples such as  $\mathbb{R}^n$ ,  $\mathbb{R}[X]$ ,  $M_{m \times n}(\mathbb{R})$ , space of all real valued functions on a nonempty set.

Subspace: definition, examples, lines, planes passing through origin as subspaces of  $\mathbb{R}^2$ ,  $\mathbb{R}^3$  respectively, upper triangular matrices, diagonal matrices, symmetric matrices, skew-symmetric matrices as subspaces of  $M_n(\mathbb{R})$ ;  $P_n(X) = \{a_0 + a_1X + \dots + a_nX^n \mid a_i \in \mathbb{R} \forall i, 0 \leq i \leq n\}$  as a subspace of  $\mathbb{R}[X]$ , the space of all solutions of the system of  $m$  homogeneous linear equations in  $n$  unknowns as a subspace of  $\mathbb{R}^n$ .

Properties of a subspace such as necessary and sufficient condition for a nonempty subset to be a subspace of a vector space, arbitrary intersection of subspaces of a vector space is a subspace,

union of two subspaces is a subspace if and only if one is a subset of the other.

Linear combination of vectors in a vector space; the linear span  $L(S)$  of a nonempty subset  $S$  of a vector space,  $S$  is a generating set for  $L(S)$ ;  $L(S)$  is a vector subspace of  $V$ ; linearly independent/linearly dependent subsets of a vector space, examples

### Unit III: Bases and Linear Transformations (15 Lectures)

Basis of a finite dimensional vector space, dimension of a vector space, maximal linearly independent subset of a vector space is a basis of a vector space, minimal generating set of a vector space is a basis of a vector space, any two bases of a vector space have the same number of elements, any set of  $n$  linearly independent vectors in an  $n$  dimensional vector space is a basis, any collection of  $n + 1$  linearly independent vectors in an  $n$  dimensional vector space is linearly dependent, if  $W_1, W_2$  are two subspaces of a vector space  $V$  then  $W_1 + W_2$  is a subspace of the vector space  $V$  of dimension  $\dim(W_1) + \dim(W_2) - \dim(W_1 \cap W_2)$ , extending any basis of a subspace  $W$  of a vector space  $V$  to a basis of the vector space  $V$ .

Linear transformations; kernel  $\ker(T)$  of a linear transformation  $T$ , matrix associated with a linear transformation  $T$ , properties such as: for a linear transformation  $T$ ,  $\ker(T)$  is a subspace of the domain space of  $T$  and the image  $\text{Image}(T)$  is a subspace of the co-domain space of  $T$ . If  $V, W$  are real vector spaces with  $\{v_1, v_2, \dots, v_n\}$  a basis of  $V$  and  $\{w_1, w_2, \dots, w_n\}$  any vectors in  $W$  then there exists a unique linear transformation  $T : V \rightarrow W$  such that  $T(v_j) = w_j \forall j, 1 \leq j \leq n$ , Rank Nullity theorem (statement only) and examples.

Tutorials Based on Course : RUAMAT202	
Sr. No.	Tutorials
1	Solving homogeneous system of $m$ equations in $n$ unknowns by elimination for $(m, n) = (1, 2), (1, 3), (2, 2), (2, 3), (3, 3)$ ; row echelon form.
2	Solving system $Ax = b$ by Gauss elimination, Solutions of system of linear Equations.
3	Verifying whether given $(V, +, \cdot)$ is a vector space with respect to addition $+$ and scalar multiplication $\cdot$ .
4	Linear span of a non empty subset of a vector space, determining whether a given subset of a vector space is a subspace. Showing the set of convergent real sequences is a subspace of the space of real sequences etc.
5	Finding basis of a vector space such as $P_3[X]$ , $M_3(\mathbb{R})$ etc. verifying whether a set is a basis of a vector space. Extending basis of a subspace to a basis of a finite dimensional vector space.
6	Verifying whether a map $T : X \rightarrow Y$ is a linear transformation, finding kernel of a linear transformation and matrix associated with a linear transformation, verifying the Rank Nullity theorem.

**Course Title: Linear Algebra II**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to examine dimensions of vector spaces.
CO2	to explain the concept of determinants.
CO3	to apply the concept of determinants to geometry.
CO4	to identify inner product spaces.
CO5	to outline properties of inner products.

### Unit I: Linear Transformations and Matrices (15 Lectures)

1. Review of linear transformations, kernel and image of a linear transformation, Rank-Nullity theorem (with proof), linear isomorphisms, inverse of a linear isomorphism, any  $n$ -dimensional real vector space is isomorphic to  $\mathbb{R}^n$ .
2. The matrix units, row operations, elementary matrices and their properties.
3. Row Space, column space of  $m \times n$  matrix, row rank and column rank of a matrix, equivalence of the row and column rank, Invariance of rank upon elementary row or column operations.
4. Equivalence of rank of an  $m \times n$  matrix  $A$  and rank of the corresponding linear transformation, The dimension of solution space of the system of the linear equations  $Ax = 0$
5. The solution of non-homogeneous system of linear equations represented by  $Ax = b$ , existence of a solution when  $\text{rank}(A) = \text{rank}(A|b)$ . The general solution of the system is the sum of a particular solution of the system and the solution of the associated homogeneous system.

### Unit II: Determinants (15 Lectures)

1. Definition of determinant as an  $n$ -linear skew-symmetric function from  $\mathbb{R}^n \times \mathbb{R}^n \times \dots \times \mathbb{R}^n \rightarrow \mathbb{R}$  such that determinant of  $(E^1, E^2, \dots, E^n)$  is 1, where  $E^j$  denote the  $j^{\text{th}}$  column of the  $n \times n$  identity matrix  $I_n$ .

2. Existence and uniqueness of determinant function via permutations, Computation of determinant of  $2 \times 2$ ,  $3 \times 3$  matrices, diagonal matrices, basic results on determinants such as  $\det(A^t) = \det(A)$ ,  $\det(AB) = \det(A)\det(B)$ , Laplace expansion of a determinant, Vandermonde determinant, determinant of upper triangular matrices and lower triangular matrices.
3. Linear dependence and independence of vectors in  $\mathbb{R}^n$  using determinants, the existence and uniqueness of the system  $Ax = b$ , where  $A$  is  $n \times n$  matrix  $A$ , with  $\det(A) \neq 0$ , cofactors and minors, adjoint of an  $n \times n$  matrix  $A$ , basic results such as  $A \cdot \text{Adj}(A) = \det(A)I_n$ . An  $n \times n$  real matrix  $A$  is invertible if and only if  $\det(A) \neq 0$ ,  $A^{-1} = \frac{1}{\det(A)} \text{Adj}(A)$  for an invertible matrix  $A$ , Cramer's rule.

### Unit III: Inner Product Spaces (15 Lectures)

1. Dot product in  $\mathbb{R}^n$ , Definition of an inner product on a vector space over  $\mathbb{R}$ , examples of inner product
2. Norm of a vector Cauchy-Schwarz inequality, triangle inequality, orthogonality of vectors, Pythagoras theorem and geometric applications in  $\mathbb{R}^2$ . Projections on a line, the projection being the closest approximation, Orthogonal complements of a subspace, orthogonal complements in  $\mathbb{R}^2$  and  $\mathbb{R}^3$ , orthogonal sets and orthonormal sets in an inner product space, orthogonal and orthonormal bases, Gram-Schmidt orthogonalization process, simple examples in  $\mathbb{R}^3$ ,  $\mathbb{R}^4$ .

Tutorials Based on Course : RUAMAT301	
Sr. No.	Tutorials
1	Rank Nullity Theorem
2	System of linear equations
3	Determinants, calculating determinants of $2 \times 2$ , $3 \times 3$ matrices, $n \times n$ diagonal, upper triangular matrices using Laplace expansion.
4	Finding inverses of $3 \times 3$ matrices using adjoint. Verifying $A \cdot \text{Adj}A = (\text{Det}A)I_3$
5	Examples of inner product spaces and orthogonal complements in $\mathbb{R}^2$ and $\mathbb{R}^3$ .
6	Gram-Schmidt method

**Course Code: RUAMAT302**  
**Course Title: Discrete Mathematics**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to examine if given sets are countable.
CO2	to experiment with addition and multiplication principle.
CO3	to solve recurrence relations.
CO4	to extend notions of counting to multisets.

### Unit I: Preliminary Counting (15 Lectures)

1. Finite and infinite sets, countable and uncountable sets, examples such as  $\mathbb{N}$ ,  $\mathbb{Z}$ ,  $\mathbb{N} \times \mathbb{N}$ ,  $\mathbb{Q}$ ,  $(0, 1)$ ,  $\mathbb{R}$
2. Addition and multiplication principle, counting sets of pairs, two way counting, Permutation and Combination of sets.
3. Pigeonhole principle and its applications.

### Unit II: Permutations and Recurrence relation (15 Lectures)

1. Permutation of objects,  $S_n$  composition of permutations, results such as every permutation is product of disjoint cycles, every cycle is product of transpositions, even and odd permutations, rank and signature of permutation, cardinality  $S_n$ ,  $A_n$ .
2. Recurrence relation, definition of homogeneous, non-homogeneous, linear and non linear recurrence relation, obtaining recurrence relation in counting problems, solving (homogeneous as well as non homogeneous ) recurrence relation by using iterative method, solving a homogeneous relation of second degree using algebraic method proving the necessary result.

### Unit III: Advanced Counting (15 Lectures)

1. Binomial and Multinomial Theorem, Pascal identity, examples of standard identities such as the following

- $\sum_{k=0}^r \binom{m}{k} \binom{n}{r-k} = \binom{m+n}{r}$
- $\sum_{i=r}^n \binom{i}{r} = \binom{n+1}{r+1}$
- $\sum_{i=0}^k \binom{k}{i}^2 = \binom{2k}{k}$
- $\sum_{i=0}^n \binom{n}{i} = 2^n$

2. Permutations and combinations of multi-sets, circular permutations, emphasis on solving problems.
3. Non-negative and positive integral solutions of the equation  $x_1 + x_2 + \dots + x_r = n$ .
4. Principle of Inclusion and Exclusion, its applications, derangements, explicit formulae for  $d_n$ , various identities involving  $d_n$ , deriving formula for Euler's phi function  $\phi(n)$

Tutorials Based on Course : RUAMAT302	
Sr. No.	Tutorials
1	Problems based on counting principles, two way counting.
2	Pigeonhole principle.
3	Signature of a permutation. Expressing permutation as the product of disjoint cycles. Inverse of a permutation
4	Recurrence relation.
5	Multinomial theorem, identities, permutations and combinations of multi-sets.
6	Inclusion-Exclusion principle, Derangements, Euler's phi function.

## SEMESTER IV

**Course Code: RUAMAT401**  
**Course Title: Linear Algebra III**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to explain quotient structures on vector spaces.
CO2	to explain the concepts of orthogonalization.
CO3	to apply the concepts of eigenvalues and eigenvectors to geometry.

### Unit I: Quotient Spaces and Orthogonal Linear Transformations (15 Lectures)

- (1) Review of vector spaces over  $\mathbb{R}$ , subspaces and linear transformations.
- (2) Quotient spaces, first isomorphism theorem of real vector spaces (fundamental theorem of homomorphism of vector spaces), dimension and basis of the quotient space  $V/W$ , where  $V$  is finite dimensional vector space and  $W$  is subspace of  $V$ .
- (3) Orthogonal transformations, isometries of a real finite dimensional inner product space, translations and reflections with respect to a hyperplane, orthogonal matrices over  $\mathbb{R}$ , equivalence of orthogonal transformations and isometries fixing origin on a finite dimensional inner product space, orthogonal transformation of  $\mathbb{R}^n$ , any orthogonal transformation in  $\mathbb{R}^n$  is a reflection or a rotation, characterization of isometries as composites of orthogonal transformations and translation.
- (4) Characteristic polynomial of an  $n \times n$  real matrix, Cayley Hamilton theorem and its applications (Proof assuming the result:  $A \text{Adj}(A) = \det(A)I_n$  for an  $n \times n$  matrix  $A$  over the polynomial ring  $\mathbb{R}[t]$ ).

### Unit II: Eigenvalues and eigen vectors (15 Lectures)

- (1) Eigen values and eigen vectors of a linear transformation  $T : V \rightarrow V$  where  $V$  is a finite dimensional real vector space and examples, Eigen values and Eigen vectors of  $n \times n$  real matrices, linear independence of eigenvectors corresponding to distinct eigenvalues of a linear transformation and a matrix.
- (2) The characteristic polynomial of a  $n \times n$  real matrix and a linear transformation of a finite dimensional real vector space to itself, characteristic roots, similar matrices, relation with change of basis, invariance of the characteristic polynomial and eigen values of similar matrices, every  $n \times n$  square matrix with real eigenvalues is similar to an upper triangular matrix.
- (3) Minimal Polynomial of a matrix, examples, diagonal matrix, similar matrix, invariant subspaces.

### Unit III: Diagonalisation (15 Lectures)

- (1) Geometric multiplicity and algebraic multiplicity of eigen values of an  $n \times n$  real matrix, equivalent statements about diagonalizable matrix and multiplicities of its eigenvalues, examples of non diagonalizable matrices,
- (2) Diagonalisation of a linear transformation  $T : V \rightarrow V$  where  $V$  is a finite dimensional real vector space and examples.
- (3) Orthogonal diagonalisation and quadratic forms, diagonalisation of real symmetric matrices, examples, applications to real quadratic forms, rank and signature of a real quadratic form
- (4) Classification of conics in  $\mathbb{R}^2$  and quadric surfaces in  $\mathbb{R}^3$ , positive definite and semi definite matrices, characterization of positive definite matrices in terms of principal minors.

<b>Tutorials Based on Course : RUAMAT401</b>	
Sr. No.	Tutorials
1	Quotient spaces, orthogonal transformations.
2	Cayley Hamilton theorem and applications.
3	Eigenvalues and eigenvectors of a linear transformation and a square matrix.
4	Similar matrices, minimal polynomial.
5	Diagonalization of a matrix.
6	Orthogonal diagonalization and quadratic forms.

Ramnarain Ruia Autonomous College

**Course Code: RUAMAT402**  
**Course Title: Ordinary Differential Equations**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to classify the ODE according to degree and order of ODE.
CO2	to solve an ODE.
CO3	to apply the concepts of ODE to biological sciences and physics

### Unit I: First order First degree Differential equations (15 Lectures)

- (1) Definition of a differential equation, order, degree, ordinary differential equation, linear and non linear ODE.
- (2) Existence and Uniqueness Theorem for the solutions of a second order initial value problem (statement only), Lipschitz function, examples
- (3) Review of solution of homogeneous and non-homogeneous differential equations of first order and first degree, notion of partial derivative, exact equations, general solution of exact equations of first order and first degree, necessary and sufficient condition for  $Mdx + Ndy = 0$  to be exact, non-exact equations, rules for finding integrating factors (without proof) for non exact equations and examples
- (4) Linear and reducible to linear equations, applications of first order ordinary differential equations.

### Unit II: Second order Linear Differential equations (15 Lectures)

- (1) Homogeneous and non-homogeneous second order linear differentiable equations, the space of solutions of the homogeneous equation as a vector space, wronskian and linear independence of the solutions, the general solution of homogeneous differential equation, the use of known solutions to find the general solution of homogeneous equations, the general solution of a non-homogeneous second order equation, complementary functions and particular integrals.
- (2) The homogeneous equation with constant coefficient, auxiliary equation, the general solution corresponding to real and distinct roots, real and equal roots and complex roots of the auxiliary equation.

- (3) Non-homogeneous equations, the method of undetermined coefficients, the method of variation of parameters.

Ramnarain Ruia Autonomous College

## Unit III: Power Series solution of ordinary differential equations (15 Lectures)

1. A review of power series.
2. Power series solutions of first order ordinary differential equations.
3. Regular singular points of second order ordinary differential equations.
4. Frobenius series solution of second order ordinary differential equations with regular singular points.

<b>Tutorials Based on Course : RUAMAT403</b>	
Sr. No.	Practicals
1	Application of existence and uniqueness theorem, solving exact and non exact equations.
2	Linear and reducible to linear equations, applications to orthogonal trajectories, population growth, and finding the current at a given time.
3	Finding general solution of homogeneous and non-homogeneous equations, use of known solutions to find the general solution of homogeneous equations.
4	Solving equations using method of undetermined coefficients and method of variation of parameters.
5	Power series solutions of first order ordinary differential equations.
6	Frobenius series method for second order ordinary differential equations.

**Course Code: RUAMAT501**  
**Course Title: Integral Calculus**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to apply concepts of multiple integrals in the field of physics.
CO2	to apply concepts of line integrals in the field of physics.
CO3	to apply concepts of surface integrals in the field of physics.

### Unit I: Multiple Integrals (15 Lectures)

Definition of double (respectively: triple) integral of a function bounded on a rectangle (respectively: box), Geometric interpretation as area and volume. Fubini's Theorem over rectangles and any closed bounded sets, Iterated Integrals. Basic properties of double and triple integrals proved using the Fubini's theorem such as; Integrability of the sums, scalar multiples, products, and (under suitable conditions) quotients of integrable functions, Formulae for the integrals of sums and scalar multiples of integrable functions, Integrability of continuous functions. More generally, integrability of bounded functions having finite number of points of discontinuity, Domain additivity of the integral. Integrability and the integral over arbitrary bounded domains. Change of variables formula (Statement only), Polar, cylindrical and spherical coordinates and integration using these coordinates. Differentiation under the integral sign. Applications to finding the center of gravity and moments of inertia.

### Unit II: Line Integrals (15 Lectures)

Review of Scalar and Vector fields on  $\mathbb{R}^n$ . Vector Differential Operators, Gradient Paths (parametrized curves) in  $\mathbb{R}^3$  (emphasis on  $\mathbb{R}^2$  and  $\mathbb{R}^3$ ), Smooth and piecewise smooth paths, Closed paths, Equivalence and orientation preserving equivalence of paths. Definition of the line integral of a vector field over a piecewise smooth path, Basic properties of line integrals including linearity, path-additivity and behavior under a change of parameters, Examples.

Line integrals of the gradient vector field, Fundamental Theorem of Calculus for Line Integrals, Necessary and sufficient conditions for a vector field to be conservative, Green's Theorem (proof in the case of rectangular domains). Applications to evaluation of line integrals.

### Unit III: : Surface Integrals (15 Lectures)

Parameterized surfaces. Smoothly equivalent parameterizations, Area of such surfaces. Definition of surface integrals of scalar-valued functions as well as of vector fields defined on a surface. Curl and divergence of a vector field, Elementary identities involving gradient, curl and divergence. Stoke's Theorem (proof assuming the general form of Green's Theorem), Examples. Gauss' Divergence Theorem (proof only in the case of cubical domains), Examples.

Practicals Based on Course : RUSMAT501. Course Code: RUSMATP501-A	
Sr. No.	Tutorials
1	Evaluation of double and triple integrals.
2	Change of variables in double and triple integrals and applications.
3	Line integrals of scalar and vector fields
4	Green's theorem, conservative field and applications
5	Evaluation of surface integrals
6	Stoke's and Gauss divergence theorem
7	Miscellaneous theory questions.

**Course Code: RUAMAT502**

**Course Title: Algebra II**

**Academic Year: 2022-23**

CO	CO Description
CO1	to apply concepts of multiple integrals in the field of physics.
CO2	to apply concepts of line integrals in the field of physics.
CO3	to apply concepts of surface integrals in the field of physics.

### Unit 1 : Group Theory

- i. Groups, definition and properties, examples such as  $\mathbb{Z}, \mathbb{Q}, \mathbb{R}, \mathbb{C}, GL_n(\mathbb{R}), SL_n(\mathbb{R}), O_n$  (= the group of  $n \times n$  real orthogonal matrices),  $B_n$  (= the group of  $n \times n$  nonsingular upper triangular matrices),  $S_n, \mathbb{Z}_n, U(n)$  the group of prime residue classes modulo  $n$  under multiplication, Quaternion group, Dihedral group as group of symmetries of regular  $n$ -gon, abelian group, finite and infinite groups.
- ii. Subgroups, necessary and sufficient condition for a non-empty subset of a group to be a subgroup. Examples, cyclic subgroups, centre  $Z(G)$ .
- iii. Order of an element. Subgroup generated by a subset of the group. Cyclic group. Examples of cyclic groups such as  $\mathbb{Z}$  and the group  $\mu_n$  of the  $n$ -th roots of unity.
- iv. Cosets of a subgroup in a group. Lagrange's Theorem.
- v. Homomorphisms, isomorphisms, automorphisms, kernel and image of a homomorphism.

### Unit 2 : Normal Subgroups

- i. Normal subgroup of a group, centre of a group, Alternating group  $A_n$ , cycles, Quotient group.
- ii. First Isomorphism Theorem, Second Isomorphism Theorem, Third Isomorphism Theorem, Correspondence Theorem.
- iii. Permutation groups, cycle decomposition, Cayley's Theorem for finite groups..

- iv. External direct product of groups, order of an element in a direct product, criterion for external product of finite cyclic groups to be cyclic.
- v. Classification of groups of order  $\leq 7$

### Unit 3 : Direct Product of Groups

- i. Internal direct product of subgroups,  $H$  and  $K$  which are normal in  $G$ , such that  $H \cap K = \{1\}$ . If a group is internal direct product of two normal subgroups  $H$  and  $K$  and  $HK = G$ , it is isomorphic to the external direct product  $H \times K$ .
- ii. Structure Theorem of finite abelian groups (statement only) and applications.
- iii. Conjugacy classes in a group, class equation. A group of order  $p^2$  is abelian.

Practicals Based on Course : RUSMAT502, Course Code: RUSMATP501-B	
Sr. No.	Tutorials
1	Examples and properties of groups
2	Group of symmetry of equilateral triangle, rectangle, square.
3	Subgroups
4	Cyclic groups, cyclic subgroups, finding generators of every subgroup of a cyclic group.
5	Left and right cosets of a subgroup, Lagrange's Theorem.
6	Group homomorphisms, isomorphisms.
7	Miscellaneous Theory Questions

Ramnarain Ruia Autonomous College

**Course Code: RUAMAT503**  
**Course Title: Topology of Metric Spaces**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to construct examples of metrics.
CO2	to compare properties of open, closed intervals, sequences and completeness on $\mathbb{R}$ with an arbitrary metric space.
CO3	to compare properties of continuity on $\mathbb{R}$ with an arbitrary metric space.

### Unit I: Metric Spaces (15 Lectures)

Definition, examples of metric spaces  $\mathbb{R}$ ,  $\mathbb{R}^2$  Euclidean space  $\mathbb{R}^n$  sup and sum metric,  $\mathbb{C}$  (complex numbers), normed spaces. distance metric induced by the norm, translation invariance of the metric induced by the norm. Metric subspaces. Product of two metric spaces. Open balls and open sets in a metric space, examples of open sets in various metric spaces, Hausdorff property, interior of a set. Structure of an open set in  $\mathbb{R}$ , equivalent metrics. Distance of a point from a set, distance between sets, diameter of a set in a metric space and bounded sets.

### Unit II: Closed sets, Sequences, Completeness (15 Lectures)

Closed ball in a metric space, Closed sets- definition, examples. Limit point of a set, Isolated point, A closed set contains all its limit points, Closure of a set and boundary, Sequences in a metric space, Convergent sequence in a metric space, Cauchy sequence in a metric space, subsequences, examples of convergent and Cauchy sequence in finite metric spaces,  $\mathbb{R}$  with different metrics and other metric spaces. Characterization of limit points and closure points in terms of sequences. Definition and examples of relative openness/closeness in subspaces, Dense subsets in a metric space and Separability. Definition of complete metric spaces, Examples of complete metric spaces. Completeness property in subspaces. Nested Interval theorem in  $\mathbb{R}$ . Cantor's Intersection Theorem.

### Unit III: Continuity (15 Lectures)

Epsilon-delta definition of continuity at a point of a function from one metric space to another. Equivalent characterizations of continuity at a point in terms of sequences, open sets and closed

sets and examples. Algebra of continuous real valued functions on a metric space. Continuity of the composite of continuous functions.

<b>Practicals Based on Course : RUSMAT503. Course Code: RUSMATP502-A</b>	
Sr. No.	Tutorials
1	Examples of Metric Spaces.
2	Open balls and Open sets in Metric / Normed Linear spaces, Interior Points.
3	Subspaces, Closed Sets and Closure, Equivalent Metrics and Norms.
4	Sequences, Convergent and Cauchy Sequences in a Metric Space, Complete Metric Spaces, Cantors Intersection Theorem and its Applications.
5	Continuous Functions on Metric Spaces
6	Characterization of continuity at a point in terms of metric spaces.
7	Miscellaneous Theory Questions.

#### Reference Books:

- (4) R. R. GOLDBERG, Methods of Real Analysis, Oxford and IBH Pub. Co., New Delhi 1970.
- (5) D. SOMASUNDARAM, B. CHOUDHARY, A first Course in Mathematical Analysis. Narosa, New Delhi
- (6) G.F. SIMMONS, Introduction to Topology and Modern Analysis, McGraw-Hill, New York, 1963.
- (7) SUTHERLAND, Introduction to Metric and Topological Spaces, Oxford University Press, 2009

**Course Code: RUAMATE504II**  
**Course Title: Number Theory and its Applications**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to understand various aspects of factorization
CO2	to understand importance of cryptography in today's world.

### Unit I: Basics of Graphs (15 Lectures)

Definition of general graph, Directed and undirected graph, Simple and multiple graph, Types of graphs- Complete graph, Null graph, Complementary graphs, Regular graphs Sub graph of a graph, Vertex and Edge induced sub graphs, Spanning sub graphs. Basic terminology- degree of a vertex, Minimum and maximum degree, Walk, Trail, Circuit, Path, Cycle. Handshaking theorem and its applications, Isomorphism between the graphs and consequences of isomorphism between the graphs, Self complementary graphs, Connected graphs, Connected components. Matrices associated with the graphs – Adjacency and Incidence matrix of a graph- properties, Bipartite graphs and characterization in terms of cycle lengths. Degree sequence and Havel-Hakimi theorem.

### Unit II: Trees (15 Lectures)

Cut edges and cut vertices and relevant results, Characterization of cut edge, Definition of a tree and its characterizations, Spanning tree, Recurrence relation of spanning trees and Cayley formula for spanning trees, Prefix codes and Huffman coding, Weighted graphs.

### Unit III: Eulerian and Hamiltonian graphs (15 Lectures)

Eulerian graph and its characterization, Hamiltonian graph, Necessary condition for Hamiltonian graphs using  $G - S$  where  $S$  is a proper subset of  $V(G)$ , Sufficient condition for Hamiltonian graphs-Ore's theorem and Dirac's theorem, Hamiltonian closure of a graph, Cube graphs and properties like regular, bipartite, Connected and Hamiltonian nature of cube graph, Line graph of a graph and simple results.

Practicals Based on Course RUSMATE504I. Course Code: RUSMATP502-B	
Sr. No.	Tutorials
1	Handshaking Lemma and Isomorphism.
2	Degree Sequence
3	Trees, Cayley Formula.
4	Applications of Trees.
5	Eulerian Graphs.
6	Hamiltonian Graphs.
7	Miscellaneous Problems.

**Reference Books:**

- (1) BONDY AND MURTY, Graph Theory with Applications

- (3) WEST D B, Introduction to Graph Theory, Pearson Modern Classics for Advanced Mathematics Series, 2<sup>nd</sup> Edn.
- (4) SHARAD SANE, Combinatorial Techniques, Hindustan Book Agency.

**Additional Reference Books:**

- (1) BEHZAD AND CHARTRAND, Graph theory
- (2) CHOUDAM S. A., Introductory Graph theory.

**Course Code: RUAMATE504II**  
**Course Title: Number Theory and its Applications**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to understand various aspects of factorization
CO2	to understand importance of cryptography in today's world.

### Unit 1 : Congruences and Factorization

Congruences : Definition and elementary properties, Complete residue system modulo  $m$ , Reduced residue system modulo  $m$ , Euler's function and its properties, Fermat's Little Theorem, Euler's generalization of Fermat's Little Theorem, Wilson's Theorem, Linear congruence, The Chinese Remainder Theorem, Congruence of higher degree, The Fermat-Kraitchik Factorization Method.

### Unit 2 : Diophantine Equations and their Solutions

The linear equations  $ax + by = c$ . The equations  $x^2 + y^2 = p$  where  $p$  is a prime. The equation  $x^2 + y^2 = z^2$ , Pythagorean triples, primitive solutions, The equations  $x^4 + y^4 = z^2$  and  $x^4 + y^4 = z^4$  have no solutions  $(x, y, z)$  with  $xyz \neq 0$ . Every positive integer  $n$  can be expressed as sum of squares of four integers, Universal quadratic forms  $x^2 + y^2 + z^2 + t^2$ . Assorted examples –section 5.4 of Number theory by Niven-Zuckermann-Montgomery.

### Unit 3 : Primitive Roots and Cryptography

Order of an integer and Primitive Roots. Basic notions such as encryption (enciphering) and decryption (deciphering), Cryptosystems, symmetric key cryptography, Simple examples such as shift cipher, Affine cipher, Hill's cipher, Vigenere cipher. Concept of Public Key Cryptosystem; RSA Algorithm. An application of Primitive Roots to Cryptography.

Practicals Based on Course RUSMATE504II. Course Code: RUSMATP602-B	
Sr. No.	Tutorials
1	Congruences.
2	Linear congruences and congruences of higher degree.
3	Linear diophantine equations.
4	Pythagorean triples and sum of squares.
5	Cryptosystems (Private Key).
6	Cryptosystems (Public Key) and primitive roots.
7	Miscellaneous theoretical questions.

**Reference Books :**

Practicals	20	30	50	20	30	50	20	30	50	20	30	50	200

**Course Code: RUAMAT601**  
**Course Title: Basic Complex Analysis**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to elaborate on properties of complex numbers.
CO2	to elaborate on properties of Mobius transforms and singularities in subsets of $\mathbb{C}$ .

### Unit I: Complex Numbers and Functions of Complex variables (15 Lectures)

Review of complex numbers: Complex plane, polar coordinates, exponential map, powers and roots of complex numbers, De Moivre's formula,  $\mathbb{C}$  as a metric space, bounded and unbounded sets, point at infinity-extended complex plane, sketching of set in complex plane.

Limit at a point, theorems on limits, convergence of sequences of complex numbers and results using properties of real sequences. Functions  $f : \mathbb{C} \rightarrow \mathbb{C}$  real and imaginary part of functions, continuity at a point and algebra of continuous functions.

### Unit II: Holomorphic functions (15 Lectures)

Derivative of  $f : \mathbb{C} \rightarrow \mathbb{C}$ ; comparison between differentiability in real and complex sense, Cauchy-Riemann equations, sufficient conditions for differentiability, analytic function,  $f, g$  analytic then  $f + g, f - g, fg, f/g$  are analytic, chain rule. Theorem: If  $f' = 0$  everywhere in a domain  $G$  then  $f$  must be constant throughout, Harmonic functions and harmonic conjugate.

Explain how to evaluate the line integral  $\int f(z)dz$  over  $|z - z_0| = r$  and prove the Cauchy integral formula: If  $f$  is analytic in  $B(z_0, r)$  then for any  $w$  in  $B(z_0, r)$  we have  $f(w) = \int \frac{f(z)}{w - z} dz$  over  $|z - z_0| = r$ .

### Unit III: Complex power series (15 Lectures)

Taylor's theorem for analytic functions, Mobius transformations –definition and examples. Exponential function, its properties, trigonometric function, hyperbolic functions, Power series of complex numbers and related results, radius of convergences, disc of convergence, uniqueness of series representation, examples.

Definition of Laurent series, Definition of isolated singularity, statement (without proof) of existence of Laurent series expansion in neighbourhood of an isolated singularity, type of isolated singularities viz. removable, pole and essential defined using Laurent series expansion, statement of residue theorem and calculation of residue.

Practicals Based on Course RUAMAT601. Course Code:RUAMATP601-A	
Sr. No.	Practicals
1	Complex Numbers, subsets of $\mathbb{C}$ and their properties.
2	Limits and continuity of complex-valued functions .
3	Derivatives of functions of complex variables, analytic functions.
4	Analytic function, finding harmonic conjugate, Mobius transformations.
5	Cauchy integral formula, Taylor series, power series.
6	Finding isolated singularities- removable, pole and essential, Laurent series, Calculation of residue.
7	Miscellaneous theory questions.

#### Reference Books:

**Course Code: RUAMAT602**

**Course Title: Algebra III**

**Academic Year: 2022-23**

CO	CO Description
CO1	to extend concept of normal subgroup to ideal of the ring $R$ .
CO2	to elaborate properties of ED, PID and UFD.
CO3	to find quadratic extensions of field $F$ .

### Semester VI

**Course : Algebra III**

**Course Code : RUAMAT602**

#### Unit 1 : Ring Theory

- i. Ring (definition should include the existence of a unity element), zero divisor, unit, the multiplicative group of units of a ring. Basic properties and examples of rings.
- ii. Commutative ring, integral domain, division ring, subring, examples, Characteristic of a ring, characteristic of an Integral Domain.
- iii. Ring homomorphism, kernel of ring homomorphism, ideals, operations on ideals and quotient rings, examples.
- iv. Factor theorem and First and Second isomorphism theorems for rings, Correspondence theorem for rings.

#### Unit 2 : Factorization

- i. Principal ideal, maximal ideal, prime ideal, characterization of prime and maximal ideals in terms of quotient rings.
- ii. Polynomial rings,  $R[X]$  when  $R$  is an integral domain/ field, Eisenstein's criterion for irreducibility of a polynomial over  $\mathbb{Z}$ , Gauss lemma, prime and maximal ideals in polynomial rings.
- iii. Notions of euclidean domain (ED), principal ideal domain (PID) and unique factorization domain (UFD). Relation between these three notions ( $ED \Rightarrow PID \Rightarrow UFD$ ).

iv Example of ring of Gaussian integers.

### Unit 3 : Field Theory

- i. Review of field, characteristic of a field, Characteristic of a finite field is prime.
- ii. Prime subfield of a field, Prime subfield of any field is either  $\mathbb{Q}$  or  $\mathbb{Z}_p$  (upto isomorphism).
- iii. Field extension, Degree of field extension. Algebraic elements, Any homomorphism of a field is injective.
- iv. Any irreducible polynomial  $p(x)$  over a field  $F$  has a root in an extension of the field, moreover the degree of this extension  $\frac{F(x)}{(p(x))}$  over the field  $F$  is the degree of the polynomial  $p(x)$ .
- v. The extension  $\frac{\mathbb{Q}[x]}{(x^2-2)}$  i.e.  $\mathbb{Q}(\sqrt{2})$ ,  $\frac{\mathbb{Q}[x]}{(x^3-2)}$  i.e.  $\mathbb{Q}(\sqrt[3]{2})$ ,  $\frac{\mathbb{Q}[x]}{(x^2+1)}$  i.e.  $\mathbb{Q}(i)$ , Quadratic extensions of a field  $F$  when characteristic of  $F$  is not 2.

Practicals Based on Course RUAMAT602. Course Code: RUAMATP601-B	
Sr. No.	Tutorials
1	Rings, Subrings
2	Ideals, Ring Homomorphism and Isomorphism
3	Polynomial Rings
4	Prime and Maximal Ideals
5	Fields, Subfields
6	Field Extensions
7	Miscellaneous Theory Questions

Ramnarain Ruia Autonomous College

**Course Code: RUAMAT603**  
**Course Title: Metric Topology**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to compare properties of compact and connected sets on $\mathbb{R}$ with an arbitrary metric spaces.
CO2	to elaborate on properties of sequences and series of functions.

### Unit I: Compact Sets (15 Lectures)

Definition of compact metric space using open cover, examples of compact sets in different metric spaces  $\mathbb{R}$ ,  $\mathbb{R}^2$ ,  $\mathbb{R}^3$  and other metric spaces. Properties of compact sets: compact set is closed and bounded, every infinite bounded subset of a compact metric space has a limit point, Heine Borel theorem-every subset of Euclidean metric space  $\mathbb{R}$  is compact if and only if it is closed and bounded. Equivalent statements for compact sets in  $\mathbb{R}$ ; Heine-Borel property, Closed and boundedness property, Bolzano-Weierstrass property, Sequentially compactness property. Finite intersection property of closed sets for compact metric space, hence every compact metric space is complete.

### Unit II: Connected sets (15 Lectures)

Separated sets- definition and examples, disconnected sets, disconnected and connected metric spaces, Connected subsets of a metric space. Connected subsets of  $\mathbb{R}$ , A subset of  $\mathbb{R}$  is connected if and only if it is an interval. A continuous image of a connected set is connected, Characterization of a connected space, viz. a metric space is connected if and only if every continuous function from  $b$  to  $(-1, 1)$  is a constant function. Path connectedness in  $\mathbb{R}$ , definition and examples, A path connected subset of  $\mathbb{R}$  is connected, convex sets are path connected, Connected components, An example of a connected subset of  $\mathbb{R}$  which is not path connected.

### Unit III: Sequence and series of functions (15 Lectures)

Sequence of functions - pointwise and uniform convergence of sequences of real-valued functions, examples. Uniform convergence implies pointwise convergence, example to show converse not true, series of functions, convergence of series of functions, Weierstrass  $M$ -test. Examples.

Properties of uniform convergence: Continuity of the uniform limit of a sequence of continuous function, conditions under which integral and the derivative of sequence of functions converge to the integral and derivative of uniform limit on a closed and bounded interval. Examples. Consequences of these properties for series of functions, term by term differentiation and integration. Power series in  $\mathbb{R}$  centered at origin and at some point  $4F$  in  $\mathbb{R}$ , radius of convergence, region (interval) of convergence, uniform convergence, term by-term differentiation and integration of power series, Examples. Uniqueness of series representation, functions represented by power series, classical functions defined by power series such as exponential, cosine and sine functions, the basic properties of these functions.

Practicals Based on Course RUAMAT603. Course Code: RUAMATP602-A	
Sr. No.	Practicals
1	Examples of compact metric spaces.
2	Equivalent conditions for a subset of a metric space to be compact.
3	Connectedness
4	Path Connectedness
5	Pointwise and uniform convergence of sequence of functions.
6	Pointwise and uniform convergence of series of functions and power series
7	Miscellaneous Theory Questions.

Ramnarain Ruia Autonomous College

**Course Code: RUAMATE604I**  
**Course Title: Graph Theory and Combinatorics**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to apply the concepts of colorings of graphs and planar graph in the fields of chemistry, physics and biological sciences.
CO2	to apply the concepts of combinatorics in the field of statistics.

### Unit I: Colorings of graphs (15 Lectures)

Vertex coloring- evaluation of vertex chromatic number of some standard graphs, critical graph. Upper and lower bounds of Vertex chromatic Number- Statement of Brooks theorem. Edge coloring- Evaluation of edge chromatic number of standard graphs such as complete graph, complete bipartite graph, cycle. Statement of Vizing Theorem. Chromatic polynomial of graphs- Recurrence Relation and properties of Chromatic polynomials. Vertex and Edge cuts vertex and edge connectivity and the relation between vertex and edge connectivity. Equality of vertex and edge connectivity of cubic graphs. Whitney's theorem on 2-vertex connected graphs.

### Unit II: Planar graphs (15 Lectures)

Definition of planar graph. Euler formula and its consequences. Non planarity of  $K_5$ ;  $K(3;3)$ . Dual of a graph. Polyhedron in  $\mathbb{R}$  and existence of exactly five regular polyhedra- (Platonic solids) Colorability of planar graphs- 5 color theorem for planar graphs, statement of 4 color theorem.

### Unit III: Combinatorics (15 Lectures)

Applications of Inclusion-Exclusion Principle- Rook polynomial, Forbidden position problems Introduction to partial fractions and using Newton's binomial theorem for real power series, expansion of some standard functions. Forming recurrence relation and getting a generating function. Solving a recurrence relation using ordinary generating functions. System of Distinct Representatives and Hall's theorem of SDR.

Practicals Based on Course RUAMATE604II. Course Code: RUAMATP602-B	
Sr. No.	Tutorials
1	Coloring of graphs.
2	Chromatic polynomial and connectivity
3	Planar graphs.
4	Coloring of planar graphs and platonic solids.
5	Rook polynomial.
6	Generating functions and system of distinct representatives.
7	Miscellaneous Problems.

- (2) CHOUDAM S. A., Introductory Graph theory.
- (3) COHEN, Combinatorics

**Course Code: RUAMATE604II**  
**Course Title: Number Theory and its Applications**  
**Academic Year: 2022-23**

CO	CO Description
CO1	to apply Gauss Lemma in different situations.
CO2	to understand continued fractions.
CO3	to understand and apply theory of arithmetic functions in simple situations.

### Unit 1 : Quadratic Reciprocity

Quadratic Residues and Legendre Symbol, Euler's criterion, Gauss's Lemma, Quadratic Reciprocity Law. The Jacobi Symbol and law of reciprocity for Jacobi Symbol. Quadratic Congruences with Composite moduli.

### Unit 2 : Continued Fractions

Finite continued fractions. Infinite continued fractions and representation of an irrational number by an infinite simple continued fraction, Rational approximations to irrational numbers and order of convergence, Best possible approximations. Periodic continued fractions.

### Unit 3 : Pell's Equation, Arithmetic Functions and Special Numbers

Pell's equation  $x^2 - dy^2 = n$ , where  $d$  is not a square of an integer. Solutions of Pell's equation (The proofs of convergence theorems to be omitted). Arithmetic functions of number theory:  $d(n)$  (or  $T(n)$ ),  $\sigma(n)$ ,  $\sigma_k(n)$ ,  $w(n)$  and their properties,  $\mu(n)$  and the Mobius inversion formula. Special numbers: Fermat numbers, Mersenne numbers, Perfect numbers, Amicable numbers, Pseudo primes, Carmichael numbers.

Practicals Based on Course RUAMATE604II. Course Code: RUAMATE602	
Sr. No.	Tutorials
1	Legendre Symbol.
2	Jacobi Symbol and Quadratic congruences with composite moduli.
3	Finite continued fractions.
4	Infinite continued fractions.
5	Pell's equations and Arithmetic functions of number theory.
6	Special Numbers.
7	Miscellaneous theoretical questions.

## Modalities of Assessment

### Theory Examination Pattern

#### (A) Internal Assessment - 40% 40 Marks

Sr. No.	Evaluation Type	Marks
1	Test	20
2	Assignment/Viva/Test/Presentation	20
<b>Total: 40 Marks</b>		

#### (B) External Examination- 60% 60 Marks

1. Duration: These examinations shall be of **two hours duration**.
2. Theory Question Pattern

Paper Pattern				
Question	Sub-question	Option	Marks	Questions Based on
Question 1	a	Attempt any one of the given two questions.	20	Unit-I
	b	Attempt any two of the given four questions.		
Question 2	a	Attempt any one of the given two questions.	20	Unit-II
	b	Attempt any two of the given four questions.		
Question 3	a	Attempt any one of the given two questions.	20	Unit-III
	b	Attempt any two of the given four questions.		
<b>Total Marks: 60</b>				

# Practical Examination Pattern

## (A) Internal Assessment - 40% 20 Marks

Sr. No.	Evaluation Type	Marks
1	Journal	5
2	Viva/ Multiple Choice Questions	15
<b>Total: 20 Marks</b>		

## (B) External Examination- 60% 60 Marks

1. Duration: These examinations shall be of **two hours duration**.
2. Theory Question Pattern

### External Examination- 60% 30 Marks

<b>Paper Pattern</b>	
There shall be three compulsory questions of 10 marks each with internal choice	30 Msrks
<b>Total Marks: 30</b>	

## Overall Examination and Marks Distribution Pattern Semester-VI
