Resolution No.: AC/II(24-25).3.RUS11

# S. P. Mandali's

# Ramnarain Ruia Autonomous College

(Affiliated to University of Mumbai)

Syllabus for

# Program: T.Y.B.Sc.

# Program Code: (STATISTICS) RUSSTA

(Credit Based Semester and Grading System for academic year 2024-25)

# **GRADUATE ATTRIBUTES**

S. P. Mandali's Ramnarain Ruia Autonomous College has adopted the Outcome Based Education model to make its science graduates globally competent and capable of advancing in their careers. The Bachelors Program in Science also encourages students to reflect on the broader purpose of their education.

GA	GA Description
	A student completing Bachelor's Degree in Science program will be able to:
GA 1	Recall and explain acquired scientific knowledge in a comprehensive manner and
	apply the skills acquired in their chosen discipline. Interpret scientific ideas and
	relate its interconnectedness to various fields in science.
GA 2	Evaluate scientific ideas critically, analyse problems, explore options for practical
	demonstrations, illustrate work plans and execute them, organise data and draw
	inferences.
GA 3	Explore and evaluate digital information and use it for knowledge upgradation.
	Apply relevant information so gathered for analysis and communication using
	appropriate digital tools.
GA 4	Ask relevant questions, understand scientific relevance, hypothesize a scientific
	problem, construct and execute a project plan and analyse results.
GA 5	Take complex challenges, work responsibly and independently, as well as in
	cohesion with a team for completion of a task. Communicate effectively,
	convincingly and in an articulate manner.
GA 6	Apply scientific information with sensitivity to values of different cultural groups.
	Disseminate scientific knowledge effectively for upliftment of the society.
GA 7	Follow ethical practices at work place and be unbiased and critical in
	interpretation of scientific data. Understand the environmental issues and explore
2	sustainable solutions for it.
GA 8	Keep abreast with current scientific developments in the specific discipline and
S	adapt to technological advancements for better application of scientific knowledge
	as a lifelong learner.
	1

# **PROGRAM OUTCOMES**

РО	Description
	A student completing Bachelor's Degree in Science program in the
	subject of Statistics will be able to:
PO 1	Understand, condense, visualize, analyze and interpret various data types generated in various scenarios of scientific, industrial, or social problems.
PO 2	Apply Statistical tools for data analysis.
PO 3	Pursue their higher education programs leading to post-graduate and/or doctoral degrees in Statistics, Data Science, Business Analytics, Biostatistics, Econometrics, Management Studies.
PO 4	Compete globally to enter into promising careers.
PO 5	Make a pathway to a range of traditional avenues in Academia and Industry, Govt. Service, IAS, Indian Statistical/ Economic Services, Industries, Commerce, Investment Banking, Banks and Insurance Sectors, CSO and NSSO, Research Personnel/Investigator in Govt. organizations such as NCAER, IAMR, ICMR, Statistical and Economic Bureau & various PSUs., Market Research, Actuaria Sciences, Biostatistics, Demography etc.
PO 6	Seek employment or self-employment in different sectors like Stock trading, Pharmaceutical sector, Sports, Politics, Business, Financial services and Media Industry.

#### Course Title: PROBABILITYAND DISTRIBUTIONTHEORY

## Academic year 2024-25

#### **COURSE OUTCOMES:**

COURSE	DESCRIPTION
OUTCOME	A student completing this course will be able to:
CO 1	Understand the advanced concepts of Probability theory to address diverse problems.
CO 2	Use Trinomial distribution, derive its joint moment generating function, and explore multinomial distribution.
CO 3	Use bivariate normal distribution, its properties, and assess the significance of correlation coefficient of Bivariate Normal Distribution.
CO 4	Understand and apply Order Statistics to estimate population parameters.

Course C	ode/ Unit	Course/ Unit Title	Credits/

## Course Title: THEORY OF ESTIMATION

## Academic year 2024-25

#### COURSE OUTCOMES:

COURSE	DESCRIPTION
OUTCOME	A student completing this course will be able to:
CO 1	Understand the use of Theory of estimation and the key properties of a good estimator.
CO 2	Utilize Cramer Rao inequality to determine the Minimum Variance Unbiased Estimator.
CO 3	Use different approaches like point estimation, interval estimation, and Bayes' estimation.
CO 4	Understand the full rank general linear model for analysis and its use.

#### **Course Title: BIOSTATISTICS**

Academic year 2024-25

#### COURSE OUTCOMES:

COURSE	DESCRIPTION			
OUTCOME	A student completing this course will be able to:			
CO 1	Analyse the spread and impact of epidemics using statistical methods and models.			
CO 2	Identify and apply appropriate techniques for epidemiological data analysis, including disease transmission dynamics and risk factor identification.			
CO 3	Differentiate between various methods used for potency estimation in bioassays and apply them effectively.			
CO 4	Understand the principles of dose-response relationships in bioassays and employ statistical techniques to characterize these relationships.			
CO 5	Apply statistical methodologies to design and analyze clinical trials effectively.			
<b>CO</b> 6	Differentiate between various types of clinical trial designs and select appropriate methods for specific research objectives.			
CO 7	Understand the statistical principles underlying randomization, blinding, and allocation concealment in clinical trials.			
CO 8	Apply advanced statistical methods, such as survival analysis or Bayesian approaches, to analyze complex clinical trial data and derive			

	meaningful conclusions.
CO 9	Apply statistical methods to assess bioequivalence between two pharmaceutical formulations.
CO 10	Understand the regulatory guidelines and requirements for bioequivalence studies and ensure compliance with relevant standards.
CO 11	Differentiate between various statistical approaches used to evaluate bioequivalence and select appropriate methods based on study design and objectives.
CO 12	Interpret bioequivalence study results and make informed decisions regarding the similarity or differences between drug formulations.

# Course Title: DISTRIBUTION THEORY AND STOCHASTIC PROCESSES

## Academic year 2024-25

#### **COURSE OUTCOMES:**

COURSE	DESCRIPTION	
OUTCOME	A student completing this course will be able to:	
CO 1	Understand and use the concept of generating functions and	
	probability generating functions, and analyze their properties.	
CO 2	Understand and apply different stochastic processes and calculate their parameters through derivation.	
CO 3	Describe and categorize various fundamental queueing models and	
	compute their performance measures.	

Γ	Course	Unit	Course/ Unit Title	Credits/
	Code/ Unit			Lectures
	RUSSTA601	Unit	GENERATING FUNCTIONS	15
	mar		<ul> <li>Definitions of generating function and probability generating function. Expression for mean and variance in terms of generating functions.</li> <li>Definition of a convolution of two or more sequences. Generating function of a convolution of a convolution.</li> <li>Generating functions of the standard discrete distributions. Relation between: i) Bernoulli and Binomial distributions ii) Geometric and Negative Binomial distributions in terms of convolutions.</li> </ul>	Lectures
	RUSSTA601	Unit	STOCHASTIC PROCESSES	15
		II	<ul> <li>Definition of stochastic process. Postulates and difference differential equations for : (i) Pure birth process (ii) Poisson process with initially 'a' members, for a =0 and a &gt;0 (iii) Yule Furry process (iv) Pure death process (v) Death process with μn=μ (vi) Death process with μn=nμ</li> </ul>	Lectures

RUSSTA601	Unit III	<ul> <li>(vii) Birth and death process (viii) Linear growth model.</li> <li>Derivation of Pn (t), mean and variance where ever applicable.</li> <li>QUEUING THEORY –I</li> <li>Basic elements of the Queuing model.</li> <li>Roles of the Poisson and Exponential distributions.</li> <li>Assuming the difference differential equations for birth and death process, derivation of Steady state probabilities for birth and death process. Steady state probabilities and various average characteristics for the following models: <ul> <li>(i) (M/M/1) : (GD/∞/∞), Waiting time distributions of (M/M/1)(FCFS/∞/∞) (ii) (M/M/1) : (GD/ N/∞)</li> </ul> </li> </ul>	15 Lectures
RUSSTA601	Unit	QUEUING THEORY –II	15
	IV	Other queuing models	Lectures
		i) (M/M/c) : (GD/ ∞/ ∞), ii) (M/M/c):(GD/ N /∞),	
		iii) (M/M/ $\infty$ ) : (GD/ $\infty$ / $\infty$ ) (iv) Machine Serving model (M/M/C): (GD/ k /k)

## Course Title: TESTING OF HYPOTHESES

#### Academic year 2024-25

#### **COURSE OUTCOMES:**

COURS	E DESCRIPTION
OUTCOM	A student completing this course will be able to:
CO 1	Distinguish between the Most Powerful Test and Uniformly Most
	Powerful Test.
CO 2	Develop hypotheses testing using Likelihood Ratio Test (LRT).
CO 3	Create Sequential Probability Ratio Tests for Bernoulli, Binomial,
	Poisson, Normal, and Exponential distributions.
CO 4	Differentiate between parametric and non-parametric tests and
0	apply various Non-parametric tests as appropriate.

Course	Unit	Course/ Unit Title	Credits/
Code/ Unit			Lectures

RUSSTA602	Unit	MOST POWERFUL TESTS	15
		<ul> <li>Problem of testing of hypothesis.</li> </ul>	Lectures
		• Definitions and illustrations of i) Simple	
		hypothesis ii) Composite hypothesis iii)Null	
		Hypothesis iv) Alternative Hypothesis v)Test of	
		hypothesis vi) Critical region vii) Type I and	
		Type II errors viii) Level of significance ix) p-	
		value x) size of the test xi) Power of the test	0
		xii) Power function of a test xiii) Power curve.	
		• Definition of most powerful test of size $\alpha$ for a	
		simple hypothesis against a simple alternative	
		hypothesis. Neyman-Pearson fundamental	$\mathbf{N}$
		lemma.	
RUSSTA602	Unit	UNIFORMLY MOST POWERFUL & LIKELIHOOD	15
		RATIO TESTS	Lectures
		• Definition, Existence and Construction of	
		uniformly most powerful (UMP) test. Likelihood	
		ratio principle.	
		• Definition of test statistic and its asymptotic	
		distribution (statement only)	
		<ul> <li>Construction of LRT for the mean of normal</li> </ul>	
		distribution for i) known $\sigma^2$ ii) unknown $\sigma^2$ (two	
		sided alternatives).	
		<ul> <li>LRT for variance of normal distribution for</li> </ul>	
		i) known $\mu$ ii) unknown $\mu$ (two sided alternatives	
		hypotheses)	
RUSSTA602	Unit	SEQUENTIAL PROBABILITY RATIO TEST	15
RUSSTAUUZ	III	(SPRT)	Lectures
		• Sequential test procedure for testing a simple	Lectures
		null hypothesis against a simple alternative	
		hypothesis. Its comparison with fixed sample	
£		size (Neyman-Pearson) test procedure.	
		• Definition of Wald's SPRT of strength ( $\alpha$ , $\beta$ ).	
0		Problems based on Bernoulli, Binomial,	
		Poisson, Normal, Exponential distributions.	
		Graphical /tabular procedure for carrying out	
		the tests.	
0		<ul> <li>ASN and OC Function</li> </ul>	
DUCCTACO2	llnit	NON-PARAMETRIC TESTS	15
RUSSTA602	Unit		_
	IV	Need for non-parametric tests.	Lectures
		Distinction between a parametric and a non-	
		parametric test.	
		• Concept of a distribution free statistic.	
		Nonparametric tests. (i) Sign test (Single and	

	Two samples) (ii) Wilcoxon's signed rank test	
	(iii) Median test (iv) Mann–Whitney test (v) Run	
	test. (Single and Two samples)	
	(vi) Fisher Exact Test (vii) Kruskal Wallis	
	ANOVA (viii) Friedman ANOVA	
•	Assumptions, justification of the test procedure	
	for small & large samples.	

	Course Code: RUSSTAP601(B)
Sr. No	Practicals based on course
1	Testing of Hypothesis 1
2	Testing of Hypothesis-2
3	SPRT
4	Non-Parametric test-1
5	Non-Parametric test-2
6	Use of R software.

#### Course Title: APPLIED STATISTICS-II

#### Academic year 2024-25

## COURSE OUTCOMES:

COURSE	DESCRIPTION		
OUTCOME	A student completing this course will be able to:		
CO 1	Understand the principles and assumptions underlying multiple linear regression analysis.		
CO 2	Identify and evaluate the relationships between multiple independent		

	variables and a dependent variable.
CO 3	Perform model diagnostics and assess the goodness of fit of multiple linear regression models.
CO 4	Understand the fundamental concepts and measures of reliability.
CO 5	Apply statistical methods to assess and analyze reliability data.
CO 6	Evaluate the reliability of systems, components, or processes using appropriate reliability models and techniques.
CO 7	Understand the principles and concepts of time series modeling.
CO 8	Apply various time series analysis techniques, such as decomposition, smoothing, and forecasting methods.
CO 9	Evaluate the stationarity of time series data and implement appropriate transformations if necessary.
CO 10	Understand the principles and concepts of cluster analysis.
CO 11	Identify appropriate clustering techniques based on data characteristics and research objectives.
CO 12	Apply clustering algorithms such as K-means
